# How to Install CraftHub's Mods and Shaders

Installing Fabric

To install Fabric, open the 'Mod Launcher Install.exe' and then select version 1.19.2 in the window and choose loader version 0.14.21.
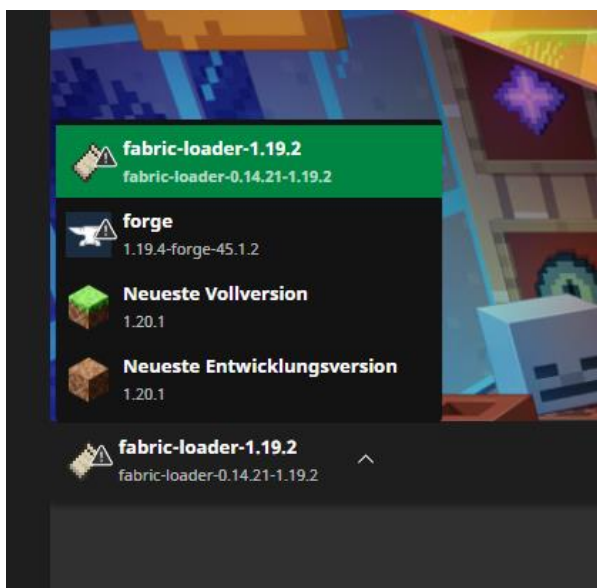

It should look like this:

If this window appears:

Press 'OK' and close the Fabric window.

Now you have Fabric installed, and you can find it in the Minecraft Launcher, like this:

## Installing Mods and Shaders

Next, you need to install the mods to join CraftHub. Here's how to do it: Since you are currently in the 'CraftHub' folder, right-click once on the 'mods' folder here and press 'Copy' or use the copy symbol. Then type the following into the long top bar: "%APPDATA%\.minecraft" and press Enter. This opens the Minecraft folder, and it should look something like this:
(If you see fewer files, that's okay) Now either click the paste symbol in the top bar or right-click in an empty area and press 'Paste' or use the paste symbol. This copies the 'mods' folder from CraftHub into your Minecraft folder. Repeat the same process with the 'shaderpacks' folder in your 'CraftHub' folder, where this Word document is located.

Setting Up Controls

Now you have finished the installation, but there are still a few things to set up. First, open the Minecraft Launcher and select 'fabric-loader-1.19.2' as follows:

Then click 'Play'. If you get this message, you can simply check the box and press 'Play':

Du bist dabei, eine Installation von Minecraft: Java Edition zu spielen, die modifiziert wurde. Wir können nicht garantieren, dass das Spiel die neuesten Sicherheitsfunktionen unterstützt.

Spiele eine neuere Version von Minecraft: Java Edition ohne Modifikationen, um diese Funktionen zu nutzen.
Erfahre mehr über die Sicherheitsfunktionen für Spieler ☑

☑ Ich verstehe die Risiken. Warne mich in Zukunft nicht noch einmal wegen dieser Installation.

Abbrechen   **Spielen**

The startup may take a while; that's normal.

As long as there are no errors, everything is okay. In Minecraft, go to 'Settings' and then 'Controls,' and click on 'Key Binds.' Scroll down until you find the 'Toggle Full Brightness' option, like this:

Too Many Players

|		
Display only heads	Not bound	Reset
Enable optimization	J	Reset

Change the button to a key on the keyboard. Then scroll down until you find "Enable optimization," select it, and press "ESC" on your keyboard, and this option will change to "Not Bound."

Do the same with these options, meaning select them, and press 'ESC' on your keyboard:

AntiGhost

Reveal ghost blocks	g	Reset

AutoSwitch

AutoSwitch Toggle Key	r	Reset

Next, scroll down to 'Cobblemon' and for 'Hide Party Overlay' change the button to 'ü':

Cobblemon

Hide Party Overlay	P

Then, in the 'Origins' section, change the button from 'g' for 'Active Power (Primary)' to 'z' and 'Active Power (Secondary)' to 'u,' and 'View Origin' from 'o' to 'ö':

Finally, press 'Done' since you are now finished here.

Congratulations, you've done it!
